From time to time, use the Map to verify that all trains are working properly. I am not going to use the whole m © m above, build elevators conveyors to cut the roof of the cave also © m working. Full Level 6 - Expanded power infrastructure. A scheme showing the temporary production of one. Main bus
 designs may appear cooler, but modular layouts have shorter belt lengths, which in turn saves construction material and reduces occupancy. With our current production rate of multiple ingots, we can first aim to produce 40 Turbo Motors/min. Have fun with the colors! Clear the configuration by manually placing 15 stacks of empty boxes in five
packaged Water refineries. You can't use photo mode as magnifying <sup>3</sup> (use the mouse wheel to change the CDV). There is enough foliage even in the wilderness of the Dune to last until sustainable power becomes available. While waiting for material from the Space Elevator, collect more Power Slugs and turn them into Power Shards, then overclock the Miners accordingly. Stack splitters through manufacturers into a ladder-shaped pattern. Click Recipe -> Parts -> Refurbished Iron Plate Hover with your mouse your recipe, then click 'Add to task list' up to 10 RIP are added to list. I'm going to the site as shown below, stand
 between the 3 and Iron. Please note that this Scan is reduced from 750/min to 667/min. Higher tubes will be filled last. Interact with E with a railway or the locomotive elé trica V, give the train a name, and set the time according to the picture below, then set it to the 'Auto' mode. This is necessary to give priority to nuclear power stations. After the
pig's dead, we can explore .emara ed seroturtsnoc sod siod ed adÃas a odnasu ,obac arap roturtsnoc mu e emara arap seroturtsnoc mu e emara arap seroturtsnoc mu e emara arap seroturtsnoc ortang platform to house the new car generators. However, it is not consistent, since our fuel production of plastic and rubber. Blade Runners can now be reequped. If you get stuck, get out of the vehicle and dismantle it.
 Hub 1 update was completed. When he looks at you, stop moving. Pass the mouse over the RIP recipe and add 10 rip the list of pending tasks. The shallow water is good. Another Hyper Tube support will be automatically added to the end. Additional mother slots can be unlocked later. Look for Iron Main again in V. The trains can rotate unexpectedly
and can cause the items to be mixed in the belts. Mire a divider in the middle of the belt and build it. Avoid the waste, mixing the recycled semlic with the fresh belt fresh after the seal builders, but before the foundries. Choose a Riser tube (the vertical part of a tube) and build a tubulation pump near its bottom. Continue building higher floors for the final steps of Turbo Motors automation. Wire, riot wire, healthy biofuel, rip, rotor, modular structure, axle beam, axion tubulation, bei, nobelisk: Mother one pile each blade runners, xeno-marsher, Berryl Nuts, Nobelisk Detivator, Chainsaw, Object Scanner as we are extending the power grid, bring extra cables and concrete. They will be used
later in the energy of the cars. A nuclear center produces five nuclear/minute waste when it operates 100 %. To time trains, activate the "auto pilot" of the 2nd train when the first has reached the opposite state. The "recycled" and "fresh" features are the same. 750 / 4.5 = 166.67; round you to the most late of 3, that A© 168. Oil extractors 3 not be overclocked alé m of 300 m3 / min, since There is the maximum flow of a pipeline.  nodes supplying the base; upgrade all of them to Miner Mk.2 and overclock all each of them to 270 / min. Set their recipes as shown in the schematic. Logistics Mk.2[] Build the MAM somewhere near the HUB. For each type of resource, build arrays of Refineries and Water Extractors with the correct ratio. The player-controlled game character, the
 pioneer, lands on an alien planet named MASSAGE-2(A-B)b with only basic tools to build The HUB. Check if the Nuclear Power generates 125 GW. After the module is constructed, test it by feeding the ingredients via temporary Containers. When the Lizard Doggo finds something, the item generated will be displayed in this single slot. Aim at a flat
 area of ground. Trains are effective for transporting large amounts of items over long distances. Preparing a belt of each resource for the Nuclear setup. Railways conduct Power Grid. Build two rows of Foundations and some Pipeline Junction Crosses aligned with Water Extractors
as shown below. Adjust the position of the Landing Pad where necessary. For a multiplayer session, all clients must be running the same game version as the host to be able to join the game. If the belt is too long, additional Iron Plates will be required. They will still work even if not underclocked. one stack each Xeno-Basher, Beryl Nut, Paleberry, Chainsaw, Nobelisk Detonator, Object Scanner, Rifle, Blade Runners, Jetpack, Gas Mask. When they move, they should meet at the midpoint of their schedule. Connect the Splitters and the Manufacturer with belts and Conveyor Lifts. The 4th and 6th floors will be the belt-transfer floors. Take note: items cannot be directly dispensed onto a Conveyor Belt via manual interaction. Manual crafting can take a longer time. Avoid mixing 1-way and 2-way Trains in the same network. Use the wheel to rotate it. The ingredients (60 Iron Plates and 120 Screws) are automatically added to the list. calculator and enable or disable certain recipes. We can build more of them later. Hold down ¢Ã§Â Shift to add
 10 at once, or edit the number in the text box and press ¢ÃµÂ Enter. When constructing the ramp, be careful not to exit the ground surface. We can simplify it by splitting its schematic so that each part only calculates a few ingredients. A 2:2 belt balancer. Find the Limestone node due south of our base by visually looking for it and place three
 Portable Miners there. Paint the wall every 5th, starting from the 2nd wall from the ground. Start at Rocky Desert, immediately head for the Iron node at the West (below the rocky shade), and rush for HUB Upgrade 1, while avoiding Flying Crabs at all. Production facilities for other components will be built on the 6th floor and above. To minimize
 belt usage, build the next factory that requires them nearby. In the build menu, add four Smelters, three Power Poles and seven Power Lines to the To Do List. The direction of the Container should be alternated for each layer. You can scroll between 10 different hotbars with Alt + scroll. When falling from above, land on the green jelly part of the Lorentzian for each layer.
Landing Pad. Briefly connect the Nuclear Power to the main power grid to start the Water Extractors, then disconnect it again. Once the Motor production is up and running, sink the produced Motors to start farming the AWESOME points. A Railway transporting Uranium, built on a Ramp, cutting through the decommissioned Coal Power. In vertical build mode, the vertical part is always generated at the endpoint. Add four Oil Extractors and two Refineries to the To Do List. Optional: At the mainland East of the Oil Islands is a large cave; scout the area and scavenge the Power Slugs, Computers and other material laying around. Press ¢ÃÂŞÂ Shift to toggle back to running mode. A Refinery stops working if any of its output slots are full. Expand the platform. A unit of Conveyor Belt is two meters long. Mine about 80 Iron Ore. We can now clip the ground with the Hyper Tube. Refer to the previous section to recall how to time the Trains.
 685 Alclad Aluminum Sheet/min at the moment, so there are two approaches: To farm Sink points and to let the factory run at all times, use a Sink to handle the overflow. Place seven Portable Miners on the Quartz node and mine 700 Raw Quartz. Near the base, split the Railway and build another station for unloading of Plastic and Rubber. Mine out
 its deposit too. Prioritize unlocking Overclocking, Slug Scanning, Flower Petals, Color Cartridges, and Nuts Scanning. Connect them with a 5th Pipeline. Build Walkway bridges for crossing parallel belts or buses. It might seem like a lot of work compared to manual crafting all the way to HUB Upgrade 6, but this is an investment that will benefit in
 the long run. Automate the following items with Manufacturers: We only ever need 100 Adaptive Control Units (ACU) - or two stacks of it. HUB Upgrades. Make sure the power demand. Higher tiers of Milestones, in turn, are unlocked at the Space Elevator. Start from the
7th floor and build the following setup according to your own preferences. Select the recipe, then click and hold the craft button. Re-tame them if that happens. Alternatively, we can build all these in 2D - place all Splitters on the same level, similar to what we did for Assemblers. A quick tap on the Resource Scanner key re-scans for the previously
 selected resource type without popping up the scanning wheel. Further reading: Nobelisk Detonator Continue to research the Sulfur Research Tree; lookout for those that expand inventory and hand slots. Coal Power 2[] Revisit the Coal Power. Return to the cave, collect at least 2000 Mycelia by using Chainsaw, then store them in an Industrial

products. The maximum rate of nuclear waste production is 50 Åf - 5 = 250 / min, and an industrial storage container can store 48 ã—500 = 24000. as the belt speed It is currently limited to 60 items / min, avoid overclock now. Instead, move to Northeast about 450 meters, to see a river. As always, check the configuration and if all is working
 limit of a conduct, which is 300 m3/min. Use Ctrl+ to put all the leaves on it. Note that the mox caudal of the item is limited by belt speed, measured in items/min. Producing 900 Rubber / Min from 300 m3 / min of gross petram without waste. One power pole has four connections: two for buildings and two to chain other posts. Connect the power
 lines between car generators, water and miners extractors, but no connect them in the main chain (at the base) yet. For example, start in Miner, then Smelter, etc. PLANEAL PRODUCTION PLAN TO 900/MIN. For the production of plastic to the
 output belt. The center of the screen indicates that the number of Mãe © Rio de Iron is 'normal'. Build two builders each left and right of the middle builder using the Snap key. In the image below, 780/min is painted by cyan. This section must be read in conjunction with the previous section: #Mority to think. Their
directions and distances are indicated in the We'll soon find our first fight, so keep an eye on him. Water is partially recycled in the process, thus a smaller amount of Water from water extractors is needed. Notice the additional control keys as displayed below the screen. Create all the necessary material. Place it in the same relative position of the
 wall for each colored wall. Wait for the conclusion of the survey. All polymer resin will be converted to rubber instead of plastic for maximum efficiency. Split a pile of Concrete to fill many spaces, as shown below. The belt platform and the train platform do not need to be built in full size. When done crafting there should be slightly more iron bars
has a power outage, it may be necessary to prepare the entire system, using many biomass burners. Interact with And the Lighthouse and type a name; Let's call it a "lean." Optional: Disconnect the Coal belts that provide the C
 the ability to clean up overdue items when not paused: this is only needed for factories that involve by-products. Build another copy of the RIP and Rotor configuration above using the remaining available Iron nodes. Touch both. Make sure you don't miss any Crash Sites that contain RIPs and Modular Frames. Connect a side outlet of the Splitter to

bosstii. ERrerens areifaitai is sufficient for 0.96 * Refinery producing Alumina Solution. Overclock all Miners to 225% for 270 Coal/min, which is equal to the Power Line from both Miners to the cave entrance and connect them to the
 main Power grid. Click 'Select Milestone' to confirm. There will be three identical modules to be built. Fuel Power[] Chances are all four of these Alternate Recipes have yet to be unlocked: Compacted Coal, Turbofuel, Heavy Oil Residue, Diluted Packaged Fuel. Avoid cutting the Nut tree and Berry flower, as their fruits regrow every three days (150
a Storage Container. If you have tested the Plastic setup, observe that the whole system goes into a deadlock state after some time: the Polymer Resin backs up, stopping the HOR production and thus shutting down the whole line. Move forward slowly, aggro one at a time to kill them one-by-one. Bring some Paleberry with you. Make sure it is
running! Some of our Train schedules have two or more Trains running on the same route. For each pair of Nuclear Power Plant, use the modular layout as shown below. For normal and impure Miners, they are capped at 600/min and 300/min respectively at 250% clock speed. You can set it to other numbers as well, but avoid hotkeys one to four as

 . .t tub. LLo and green arrows for exit on their holograms. Others are hidden inside caves. Use Daniel's Calculator[4] to generate the diagram below and build accordingly. The double ramp fits without the need to build a foundation in the middle, which is much more convenient than a regular ramp. Do not panic if you kill yourself; You can always
 return to the place of death to retrieve your items. It will take several trips to bring the necessary supplies there. Connect them with belts and power. You can remove AWESOME Sink once you are satisfied with the configuration. Leave enough space between the buildings so you can connect them with belts later. Build three power poles and connect
 them all with power lines, as shown below: Use hotkeys and customize them for your convenience. GasMask[] Explorer[] In MAM, search the explorer. While the unmount mode is active, the edge of the screen will flash red. Enter the name of the session. By building an additional assembler of A.I. Limiters creation, we can make Quickwire-to-A.I.
 Construct ratio limiter 1:1, simplifying the configuration. Monorail Train technology[] Complete Level 6 - Monorail Train technology. A foundation is eight meters wide. It should be positioned at least at the same height of the water level or slightly above it; refer to the picture below. On the other side of it is the Terminal HUB.
 Use an Online Map and look for a location with all of these located nearby: such as the Lake Forest, as shown below. Double- to equip the Potable Miner in your hand slot. Allow plenty of time for the nuclear fuel rods to fill the buffers of each nuclear power plant to achieve maximum capacity. Almost all resources are guarded by creatures like Hairy
Tail Dogs. There is no limit on how many times the pioneer can be killed, since there is no Game Over game. It is advisable to start the Miner upgrade from the aluminum production chain, as we have to increase the Turbo Motor Motor there is no limit on how many times the pioneer can be killed, since there is no Game Over game. It is advisable to start the Miner upgrade from the aluminum production chain, as we have to increase the Turbo Motor Mot
 split the stacks and distribute the NFRs for each El© trica plant. Now we can work to complete the HUB. You can't find some unstable plants around the Red Jungle that are blocking construction. Build a facility to automate the production of multiple resources needed to progress across milestones, culminating in a fully updated space elevator for
 project assembly. As we will soon face the dangers, first use the ESC menu to save the game. There are four iron 3 located 500 meters west of the base. Delete the top wall above the platform. The full advance station Turbofuel, generating 25 GW. The complicated part is the handling of recycled sulphuric acid. Alternatively, you cannot build a
 dedicated Railway between the oil³oil advance station and the base. Merge the Water extractors into a tube, then bring the Water extractors into a tube, then bring the water up using the same whole. The só equipment can be created in the equipment workshop. Verify that the production rate matches. Use an online calculator and select a combination of the most efficient
 alternative recipes to create Turbofuel. Bauxite: Three belts (two pure + one normal), Carbon: two (pure) copper belts: a belt (normal). Connect the other end back to the packed fuel refineries. Copper and cat ingots require lots of refineries for each min range; divide each refinery block into two to facilitate
construction. Project Assembly - Framework[] To complete 'Project Assembly - Framework', we need more Smart Plating, Versionable Framework and Automated Tape. Now we have to rebuild it, but on a larger scale. Nuclear waste must be transported away from electrical devices to prevent their blockage. Delayed by-products can clog refineries
 means some machines will have to be removed compared with the 120/min module. Build a platform for the Coal Power Plant. Radio Signal Scanning allows the Object Scanner to scan for Crash Sites within a 300-meter radius. Saw down all the trees nearby and craft them into Solid Biofuel; automate this process with Constructors. If you run out of
 building space, build more Foundations. The game narrator, ADA, will advise you about each objective. By referring to the Beacon labeled 'Oil' on the compass, go back to the Oil Islands. Then, scan again for Iron Ore. Motors 2[] In the Esc menu -> Options, increase the auto-save interval to 12 minutes to reduce waiting time (auto-save induces lag). it
progress to the longer researches. In that case, you can skip all the steps below. Do not unlock Explorer yet. Portable Miners are not blocked by these resource deposits. Unlock all the way down to Crystal Oscillator. Ceil (5/2) = 3. Build production floors before constructing the unloading Train Stations. Craft them into Biomass, then insert the
 Biomass into the Biomass Burners. A second-hand slot can be unlocked. Do not be afraid to build spaghetti as this setup is temporary. Try them out! Tips and Tricks[] In the early game, pick up leaves as you walk. Observe the Space Elevator's delivery animation. An alternative approach is to increase the number of Trains instead of its length; in that
top of each other. Bauxite, water, carvan, raw quartz, minimal copper and is required to produce alumannium leaves efficiently. Adjust where it is necessary. Make sure it is necessary. Make sure it is raw in V. We will build 168 FUEL generators. No hurry. Mire carefully on the existing ELA line to disassemble it. The same applies to the MK.4 carrier elevator. Replace copper
 and mãe © Copper by mk.4 straps to increase the 270/min items rate to 480/min. From the ground foundation, stack nine Foundation 8m x 2m vertically as a support/temporary measurement. Building the hub [] build the hub below and east of the rocky stage. A slot for the body and a grooving for the displays in the uselessness. Extend the railroad
from the mining post of urgent to the Sadlic Post to reuse the existing railway. Perhaps you need to travel several times due to the large amount of construction of 50 nuclear central construction. Use the of the ofn and select iron rod.
The department gives him 50-100+ minimal. This map is generated by the upload of the satisfying interactive map [5]. Head to the southwest-leaf stain. Production Plan of 44.44 Caterium Computers / Min. Marco's requirements are displayed in the upper right corner of the game screen. Build an explorer in the Chã £ o and fills it
 with a packaged combustible or healthy biofuel. Avoid looting biomass during this step, remove the invent gap and abundant © biomass in the North Forest. Before moving[] In the scene, the pioneer (the game character) takes the Build Gun and leaves the North Forest. Before moving[] In the scene, the pioneer (the game character) takes the Build Gun and leaves the North Forest. Before moving[] In the scene, the pioneer (the game character) takes the Build Gun and leaves the North Forest. Before moving[] In the scene, the pioneer (the game character) takes the Build Gun and leaves the North Forest. Before moving[] In the scene, the pioneer (the game character) takes the Build Gun and leaves the 
 extractors; There is a lot of space in the lake and we need to build 11 of them. There is no normal limestone not used and a pure pure nearby copper. When you tie your diversions, observe all tile elements and use mirroring/inversion to reduce the number of necessary buildings. The buildings at the end of a collector must wait for all previous
buildings to be filled first before receiving their ingredients. Construct 13 fuel generators, played in the fuel production refineries. A suitable mall and warehouses 3 [] NUT GOLDEN NUT [] Turbo Since a sufficient number of coupons is obtained, buy all the states you can pay, including the golden nut. Create all the iron ingots we can afford,
 consuming the whole minimal in the invention. Disassemble the old copper and caterium production of aluminium as shown below. Keep the gross quartz in the invention and exclude excess portion miners. Pay attention to the sound they make
See the image below. Tips for building a manufacturer's compact collector: Build straight manufacturers and stack dividers in a staircase pattern, a base away from the manufacturer are flow indicators in the center of each long tubulation. The same technique applies to dividers and fusions. For the configuration of the train, assign clusters of
use of resources to be grouped as an advanced post of mining. Press F to insert the disassembled mode: Mira in the Drop-Pod to be highlighted in Orange. Use foundations or catwalks to build a path through the sea, as the swimming is relatively slow. Alternate the mode of construction r for 'vertical' mode and create the tube as shown. Satisfaction is
an open game. Use WASD to move. They exist flying crab and alpha sprinkles that keep the oil tanker; Careful approach. The same fan, view on the right side. Connect the second second to the divider with a belt. Use the equipment workshop to create five portion miners. Unlock Power pole MK.2, as it has seven connectors instead of 4. They burn for
 much longer, as it contains a much higher fuel value. 

S sometimes, the cen can forget their owner. From now on, use long range transport trains (> 800m). There are new alternative recipes that can be unlocked through rigid discs. Connect the entire infrastructure. Build another Hyper Tube cannhom on the base, base -oriented islands for efficient
2 -way Hyper Tube transportation. & Nbsp; Use the online map in conjunction with the game map to guide yourself with the position of Crash sites. A similar approach applies to rubber production. The colored gun is unlocked in the mam. Construct a corresponding discharge estate in the refinery area for each advanced mining post. Our next long
 term goal is to unlock Tier 5 and Tier 6. Other readings: Colorful Chã £ o Pistol and counting up, paint the 2nd wall. Build walkways or ramps to provide access to climbing. Alternatively, you can twice click on it or drag it to the mother's slot. Focus on one duty at a time. If you want to use foundations with more than 1 meter thick, you may need to
increase them even more to reach the vertical clearance of 17 meters. Build four additional founders, aligned side by side with the first: Press the 5th Shortcut key to the founder. Build a miner in the first number of quartz and connect it with energy. the main elevator and the distance when dealing with the transport of fluids. The water tube for a

one. Jetpack [] Manufacture 1 [] Unlock Supercomputer, Fabric, Rifle and Cartridge in the Anyway, the storage containment to store copper leaves should be constructed near the base. Our next purpose is to produce 40 turbo motors / min. If the constructed near the base. Our next purpose is to produce 40 turbo motors / min. If the constructed near the base.
more than one hub, it will show you not to pay! You are only one! 'The HUB - Framework is constructed. The "main one" refers to parallel straps that function as self-established materials. Attract the Doggo do Lizard to the floating foundation above the pen and then dismantle the floating foundation to arrest it in the pen. Like the wool output is 900
plastic (or rubber) / min, two are necessary for each final product. Once you put a builder, store it in buffer with a storage containment by placing an aposes to have a consistent supply of ready-to-function components. Address the department of resources and hold and while looking at it to start the miner. The scheme showing the same fan. We
expect this to be completed at once. Remove the remaining department in the no resource so that you can put a miner in it. We need many rip and rotors to complete this milestone. This, however, undermines a much slower pace. Build industrial storage containers at the base, in the area of action production. As the space elevator is not used with
frequency, we can build it to some distance. Scanner: Minã © Rio de Copper unlocked. Renew the Western Railway System, converting each one into 1 type types and merging them with the main rail network. Build a floating platform (57 x 48). The right is the character of the chara
 middle of an existing pipeline, fitting its hologram into the tube. Color Code of Shipping Platforms to identify if it is transporting 780/min or 600/min. straP BUH meti o ,odatnomsed res dop-pord o s³ApA .obruT serotom so ratnemila arap etnatser o e serotom so ratnemila arap mu :sopurg siod me srotatS ed o£AşAudorp a ridiviD .nim/3m 009 e
nim/3m 006 ertne ¡Atse adivlovne odiulf ed amix¡Am edaditnauq Added to Pioneer invent. General view [] Satisfactory A workmanship construction game, centered on expansion, exploration and automation. The platform must be positioned below the carbon n³, but above the iron n³. In this example, the color red is chosen. Using the iron ingots
produced by the merging, complete the upgrade of hub 3. After the 10 minute countdown timer is over, rebuild the MAM and choose one of the options upgrade from hub 2. The number you choose so that
no item on the belt exceeds 480 items/min. Let's build the hub just a little bit correct of the steps. In order to build the factory, set your own custom 3: Domesticate all lizard dogs in the world, collecting 100% of energy slugs, Somersloops and Mercer Spheres, etc. Buildings are color coded to distinguish between 780 (standard color) and 600 items
(cyans) per minute. We only use two of them, because the oil 3 only need 337.5 / min. Attach the uranium train. Currently, Level 8 and above is unavailable for early access. After the requirements are met, pull the lever (Load -> Send) and send the package. If power travel again, check that there are enough power
generators and each generator has fuel. Verify that the top pipeline is receiving Water. Move the mouse up before putting the pole. We started to build the production of steel for this. The use of µ foundations for crafts is more effective in comparison with manual creation, since ingots usually require multiple clicks of creation (3 each). Divide the
 hyper tube in two in the middle of the ramp and leave some splash in the middle; This allows us to return to ramp into the future. Learning the o or ratisive area area with four pure Iron nodes. Stand in front of the middle Smelter, hold
the 'Snap to Guideline' key Ctrl and aim at the ground some distance away. If you face difficulty timing the Trains, consider additional Trains to the Smelter and observe the finished products to be produced in the
Constructor. Build Foundations in a diagonal zigzag shape as shown for the Railways to build on. This acts as a temporary production area. Use the online map to search for a suitable location for setting up the Aluminum production area.
arrive at different Stations at the same time. A building hologram aimed at non-foundation can be rotated by 10-degree intervals. As a safety precaution, set up an overflow system for the Polymer Resin using Smart Splitter and AWESOME Sink. Use the Jetpack to move around. Geothermal Power[] Radar Tower[] This section is optional as we have
revealed the majority of the Map area during the hunt for Hard Drives. The last module will be smaller with the leftovers, as 685 - (5 ÃÂ 120) = 85 or 685 % 120 = 85. Build them as close as possible, but not encroaching on each other. Avoid skipping ADA's narrations during your first playthrough. There are many steps involved in producing the
Turbo Motors entirely with alternate recipes, but let's start with the Stators and Motors. Build a Train Station at one end of the Railway and Power it. Most other items can be crafted at the Crafting Bench. At first, most of the Railway and Power it. Most other items can be crafted at the Crafting Bench. At first, most of the Railway and Power it.
never regenerate. Before we unlock the alternate recipes, we will first set up a temporary, inefficient factory with a lot of wastage, but still enough for bootstrapping the Plastic and FOt two nunot I lifted by Sucu . I don't you nose subsubate subrame ) name )
Others is just scaped hnowed snowtubo . 3 Lem . . 3 Refem , krame , klock , 1-year is the tebaler mberk . We need the train's round-trip time to be shorter than the maximum allowed. To reach them, build Double Ramp 8m x 8m in direction to it. The Stackable Conveyor Pole is unlocked
at Level 2 - Logistics Mk.2. Mount the 2nd Belt above the 1st Belt, fitting into the Stackable Conveyor Pole as shown below. Spoiler warning: If you don't want to explore the mechanics of the game alone, stop reading now. Add two more coal generators, then add a water extractor and a pipe pump. One belt will be carrying 780 / min, the other
carrying 120 / min. Don't stand on a Cargo Car because it's dangerous. The view in the game of the production of Nuclear fuel bars/min. Use an online calculator to calculate the scheme for 10 Nuclear/min Combat Rods and use some of the alternative recipes. Make sure it works before creating the
remaining 3. These can be purchased multiple times as long as you can't buy them. Use Elevators Conveyors to bring the miné rivers from the lower ground. After configuring the coal power, go back and complete Steps Level 1. Use this whole method to build multiple buildings online. Once your computer's production is active, renew your copper
and catus production as shown below. In front of each Pipeline Fold A to C, carefully place a Water Extractor with its tubing facing the Fed. At MAM, research Radar Technology. The cap can not be located on the empty container belt or on the packed Water belt Aboth work. Choose them when available. There are many Lizard Doggos all over the
world; try taming them all. Before moving on, build an A.I. Limiter-creation time assembler using Quickwire and copper foil, then underclock it to 30%. Calcium 3 are positioned on the ground below, We can bring them with transport elevators. New unlocked buildings can be found in the Build menu. Close the invention window ESC or click on 'X' in
the upper right corner. To this, it does not go from a waste of and fragments of power. Use transporter elevators to bring high -speed connectors and computers to the upper floor, feeding the supercomputer production. We need other potães of pottery. 2 * 20 + (12 * 30) = 400. Open flashlight B and type the cave. The effective trains for distances of
over 800 meters. Build the 2nd state near the center of the Train of Bauxite. You can also press a § SHIFT+Space to make the game hold the handicraft botan for you. A³le processing 2 [] We use a mother © all simple but inefficient, to produce plastic and rubber. Build the first state near the sea and alie. During cutting, some stones are also removed,
transferring calciums to the invention. â \in ¡Â§ Shift+ the xeno-zapper to equip it. Use the explorer to drive to the oil islands and bring back 20 piles of packaged combustible. Have a good time! LogoS [] CRACTE 100 Concrete in Benno Artiva. Make sure all trains are working properly. From the number of cars and look west, find the entrance of the
cave covered with vines as shown below. The general vision of the finished ingot refinery. With the black p³, unlock Nobelisk and Nobelisk Detonator. When crossing cliffs or ravines, catwalks or ramps may be necessary for Lizard Dogs to cross. Construct additional pipeline junctions between the two and three, four and five, six and seven. Keep
reading: Miner MK.1 a foundry requires 30 minion per minute per minute. In the center is the cost of construction. There are several power slugs on the cave ceiling. Temporarily build three biomass burners somewhere nearby, connect them with the energy of the car and then supply them with some nearby leaves. See the game's cherish display: In
the lower right corner the shortcut keys are; They are updated according to current key orders. Be careful to not o§Ãa o§Ãa o somarobas siam s³ÃN .edrat siam someriurtsnoc euq ,snert rop sodatropsnart res meved sodanifer setognil sO .rairc arap o§Ãapse ahnetnam ,avitanretla omoC .erboc ed ahlof arap o£Ã§Ãudorp ed ahnil amu a§ÃaF .aivorref ad
There, on a floating platform. PARTIALLY, or totally high of the head elevator, can never be fully filled. Press the entrance will skip its narrations. Color coding the freight platforms according to the item rate. From time to time, random items will be generated, including energy slugs. The construction materials are consumed from the invention. Touch
the three pure iron. Define the recipes of the building. Now we are producing the fabric with a controversy resin. Like only a part of the hub in a game, you can only build a hub in a game. Another refinery in the lower left corner has a pipeline connection. Drag and release the nuts to the 2nd Mother Slot to equip them. Producing 900 PLASTIC / MIN
```

from 300 m3 / min of gross oil without waste. Approach with caution and kill them. Change the distance from the vision from Daã and build a leap to climb. Unpleasant 2 - Compensation of Obstacles. The junctions must be 20 meters

```
of distance, each line positioned at the time of the construction on both sides to form a high 'bridge'. Let's build according to the scheme, as shown below. Or deliver the material manually (interacting) or use a belt connection. A red indicator means that
the building is not working properly. Later in the game, you will have better power posts. Based on the surrounding, the mining rates are stroke: 810/min, mint of iron: 810/min, mint 
character returns to the Chã £ o. The resource scanner always The most selected -type most close resource patches. Build a mother and search for the rude disk. As each input consumes 300 MW. identifier. When it reaches 125 GW, you will not be able to reconnect the Nuclear Power main elÅ ©trica network. Open Invent. Using the online map is a quick way to check the status of all machines. to to the construction of the Refinery layout, have an overview of the resources below: We can then base on this to tile the layout of
Refinery blocks for each type of resource. Railway curves are rendered as straight lines. You may dismantle the old buildings or just leave it there. As we progress, these functions will be unlocked progressively. The rocky area in the Red Jungle is contaminated with Radiation. Near the base, build Industrial Storage Containers at the end of the Plastic Planting Containers at the end of the Planting Conta
and Rubber belts. A Miner Mk.1 produces 60 Iron Ore per minute. Aim to get at least 100 Power Shards each trip. Closing with the top-right 'X' is glitchy, as it will not close the UI properly. Observe new buildings unlocked: Our next long-term target is to set up proper Coal power which will relieve us from the Biomass power generation. Test drive
the Explorer. Watch out for power demand. This means it is targeted to be dismantled. As long as you pet the Lizard Doggo after it eats the Berry but before it leaves the faults. Same schematic at 1/6 of its full size, to be built as a 'module'. A fog migh
start to appear in the meantime, reducing visibility. To drive the Explorer, interact with it from the other direction. Be sure to distinguish them properly. Build the next Junction, then hop onto it, and repeat the process. The head lift of a straight vertical pipe is easier to manage compared to a slanting pipe. Conveyor Lift can be snapped directly to a
belt connector, whether it is on a machine, belt, Splitter, Merger, or another Conveyor Lift. We will reserve it for Sulfur production chain later. The same applies to the Plastic belt before the Empty Canister Refineries. To simplify the setup, only use 1-way Trains. For now, we will skip the Jump Pads and Resource Sink Bonus Program for later. The
first space delivery requires 50 Smart Platings. on the item's name to add it to the To Do Right-click until you see 'Power Slugs' in your user interface or looking in the lower left corner. We need a lot of concrete to make μ. Therefore, start stacking them for Level 3. You can only check to host a multiplayer session or leave it private for a single player.
Just use a splitter to split the belt on nuclear power. You can't leave it untouched because trains in auto mode ignore switches. Use this to blend the leftovers of the 780 bauxite belt on nuclear power. You can't leave it untouched because trains in auto mode ignore switches. Use this to blend the leftovers of the 780 bauxite belt on nuclear power. You can't leave it untouched because trains in auto mode ignore switches. Use this to blend the leftovers of the 780 bauxite belt. Buy dual ramp package, slingers expansion pack pand catwalks. We won't need them for a while.
spot with a lighthouse and come back later to tame. Additional slots can be unlocked later. A miner port to the mine after 3 slot is filled with a 100 min stack. For this guide, select the 2nd Rocky Desert. In the impressive sink, click 'Print Coupons' and Ctrl+ to remove the coupons: build an unbelievable store. Open the hub terminal and put 10 iron
rods on it. Interact and use it. Adding a pipeline pump to a riser pipe to reset the lift from the cable to 20 meters, measured in the center of the pump. Disassemble the fabric assembler at the base, which is using biomass and mic© lio. Supercomputer 2 [] In this case, aim to produce 22.22 supercomputers/min. The first four generators receive carb
from the first belt; the remaining shot of the second belt. In the upper left corner are the current version of the game. Have all the resources ready in the Alum production area and proceed to the 3. Be careful not to get too close to the edge of the world, for the pioneer will eat to receive damage 'over the limit'. After the cave, there's a fork. Team a
jetpack. Point the hologram of the Mk.2 pole at the Mk.2 pole at the Mk.1 Pan 3 to update it. Full Level 1 - of field. Builders require reinforced iron plates (also known as RIP), which are very complex for manual crafts at the moment. This is to measure exactly 20 meters. Select 'Production' and click on PoKt ooloh the .eu .ek sudio Niban Niban sank yo kome sabo)

asiuqsep ad odatluser o omoC. sianif sotudorp ranezamra ed You know what might be around them. Bring the Achaño beam, EIB, stator and automated tape back to base with belts. Continue reading: No3 of the resource. recommend using the original concrete
recipe (calc -> concrete) instead of moist concrete, as calc³s are plentiful. Visit Lizard Doggo's cave under the hanging pins and plunder the items in the ground. However, this is not a problem, as we only need each trip to carry 450 items/min; Therefore, the round trip time allowed at the maximum A \odot t = 32 stack * (100 items/stack)/(450 items/min)
= 7.1 minutes or 7m 6s connects to this train unloading session to an ISC and then the belt to the computer and the supercomputer produces µ. Say good-bye to the Court of Trees! Scan V for carb. Insert a smart splitter into each rubber and plastic belt and set the side wing to 'overflow'. Do not build any storage containers to store nuclear fuel rods.
Paleberries can be found around grassy biomes, such as near the coal energy area. The recommended build sequence is: build a small <sup>3</sup> of buildings; Lower some splitters, μ and power poles to test building placement. Build three different floors, each with a different fun. Temporarily open a hole in the platform by removing a base <sup>3</sup> a jun and then
build a pile of walls down so that the pipeline pump is stuck. These rods can be fed into 50 nuclear power plants, which will produce 125 GW in total (125000 MW). Be creative. If you don't have the tractor unlocked, try using it. 1.5 - twice as fast. The scan results show that they are not even close to the base; The nearest 3 is 1.6 km away. The range
can be adjusted in production, build another floating platform (22 x 15). Field research [] from Tier 1, there is a refill after completing each milestone. Additional Reading: Speed of the Complete Religation Nonable 2 - MK.2 Logo. Mk.2. Assembly
Platform [] Find a large open space and build the space elevator, if you still created it. In addition to the task list, prepare: Iron rod, iron plate, concrete, cable: Mother Train piles each. Add 10 more cables. The left, is the current goal recommended by ADA. Build a 5 -story fan based on the scheme below. Construct a bridge of foundation / double
ramp connecting the inclination and cave as shown below. After 100 iron ingots are cast, the foundry for. Add eight cars generators, three water extractors and two MK.1 task list. The highest rock tower will show the direction. The Codex X window. Additional Reading: Ramous Disk that you don't need to wait for the research conclusion, let's analyze
it later. The scheme for the example above. Disassemble some of the foundations in which elevators are positioned. In sinking the local vain of collision, you may convert them to at least 35 coupons, enough to completely skip the current of action. Their containers are probably full; No dismantling these containers. Additional Reading: Radar
Tower Build a radar tower on a pillar / high rock / rock rocha, and note how it works. If the pioneer jumps too loudly or running too far from the lizard Dogos, they flee. Mouse sake each building to check their status. They are all connected in the same world. Interacting and with a pipeline to verify your containment of fluid and empty. (300/min to
impure) Any other identification is all good, as long as you can distinguish between straps from different item rates. The most connectors' pottery posts can be unlocked later. Hold the CTRL to select edifies to disassemble at the same time. (7 * 270 = 1890) Build the FIRST; Energy slugs can be collected later for overclocking. the conveyor
posts for laying raised belts, minimizing future obstruction. By building this parallel train μ, your end-of-line loops can be combined into a single return railway, as shown below. Quiz: in below (the last image in
this case), there is an unconnected building energy. This, in turn, reduces the number of Water extractors we can build. We 3 also build a train hub here to receive all the initial areas have the same gameplay difficulty
Finish upgrading HUB 4. We'll double power production very soon. You can also use the Stackable Conveyor Pole. Split to feed the HMF and Computer production at sea for easy access. Water. The fuel line must be constructed
from the nuclear power plant by June, not the other way around. Close it with the 'X' in the upper right corner or by pressing Esc. Wait until the Lizard Doggo comes and eat the berry. Empty containers involved in the configuration are fully reusable; this means that neither entry nor overflow is required. 3, when necessary. Water extractors can't be
adjusted to the guidelines, so we don't have to manually adjust your placement. Open the build menu, try entering and exiting a Hyper Tube or save and load the game. Test the store by inserting an item in the first Container and verify that it
make sure that your arrow is pointed up (the three sides of the pump will point down). Tap on all 3s of 3Leo 3 and and each of the resource from the Portable Miners if required. Build blocks of Refineries, starting from a corner of the sea. Dismantling the unused
buildings generally improves the game's performance. Use both of the Limestone nodes nearby to produce Concrete. Avoid taming Lizard Doggos and hunting Hard Drives at the same time. Setup the bootstrap factory for Heavy Modular Frame followed by Computer as shown below. In the schematic, observe that some of the items' flow rates have
exceeded the Mk.5 belt capacity (divide the item rate by 780): Split the setup into six smaller modules, such that each module will not contain items with rates of more than 780/min. Dismantle the two belts connecting the Oil Islands and the base. You can check the upper pipe's fluid content even when standing below, as the Glass Foundation is
transparent. The Power capacity is now stabilized. By separating the setup into three smaller, repeatable modules, the fluid flow within each module will be under 300 m3/min. Following a built Power Line is another way to trace your destination, provided you have constructed it during the previous trip. As there is no actual 'Win' condition, players
are not required to strictly follow this guide. An early setup of RIP and Rotor using 1.25 Iron nodes. Use an Online Calculator and input the numbers for desired Alclad Aluminum Sheets per minute. Ensure the long side is fully in contact with deep water. Drive the train into the slope. Grab the produced items (Iron Rod, Iron Plate, Wire) from the
bootstrap factory and complete Tier 1 - Logistics. Optional: Lay the Railway on the natural terrain. Quickly pick it up before the Spore Flower starts to release Poison Gas. Skip Coal Power as they take away a large chunk of RIP and Rotor, which should be dedicated to Smart Platings instead. Set up two individual lines: Storage Container (Leaves)
Constructor (Leaves -> Biomass) - (Biomass -> Solid Biofuel) - Storage container. The items will be transferred to a grid if there is not enough empty slots in the inventive of the pioneer during disassembly. See Marcos for a complete list. Observe the necessary construction material as shown in the right task list window. The 5th floor will be the
discharge of the train. As the water is difficult to transport, build the production area near a large mass of preferably in the sea. Remove temporary support and build a U-Jelly Landing Pad nearby. All buildings related to urination show failure indicators, which is the yellow indicator light due to the lack of ingredient (s). The speed of a belt can be
seen in the construction menu. It is much more fancil to build water extractors while in a higher elevation, as the hologram is centered on the undercoat point pointed out by the cursor. You can align your buildings looking for the thick green lines. The vision of the Fuel Rod Nuclear Production Plan in the Rio Delta. Tier 1 and Tier 2 [] immediately
remove all sheets from biomass burners. Find an open open space, open in the open sea, and build a platform (size 38 x 14) to the sea. At the central bottom is the garbage slot. Add any alternative recipes that have unlocked to the calculator; The result may be different from the one shown below, but will definitely be more efficient in terms of

 appear. Note that the NFR schema is complex and difficult to read. The other two ends must be placed outside the ground, one at the base and the computer that we have looted from the Crash Site earlier, custom-split it and insert only two
Computers into the Container. Review our Concrete setup at the Limestone node: To match the consumption of Limestone in the Miner, there are a few approaches: Underclock the higher (60 Limestone Production, 60 Limestone Consumption) by setting both Constructors to 67%. The intermediate
steps will not be shown here as an exercise for the reader. Tap all three Coal nodes and lay Conveyor Belts down the ramp. In addition, prepare plenty of Concrete, Cables and Copper Sheets. After subtracting the 4.5 belts we have been utilizing for the automation of RIP and Rotor, there are still 2.5 belts of Iron Ores left. If the belt has the same
direction as your travel direction, walking on it will give a speed boost. For the ratio of Electric Locomotive and Freight Car vs the resources transported, take note of the belt throughput and resource item stack size. Connect all the Junctions and Coal Generator pipe inlets with Pipelines. Troubleshooting: Cannot connect belts to buildings - Make sure
the building is aligned and rotated properly. Walk on the belt to climb up. Build one piece of the wall above the platform, then build the walls all the way down to the ground level where the Oil Extractors are located. You may have to manually enter the Train and get it unstuck. Instead of flying back to the base, use the directional keys to divert the
flight path to the Oil Islands. Complete Tier 3 - Coal Power. We can solve this by sinking all the excess Plastic and Rubber such that it will not clog the production of Fuel. Getting more Power Slugs is becoming more challenging as the Power Slugs around the starting area have been exhausted, forcing you to travel further. After click and confirm the
building, a Power Pole will be built along with the Power Line. Schematic of Supercomputers that you looted on the collision websites; They will be used â € ught later. Many leaves will be necessary to keep biomass burners running. Generally, in a rail network, the
more confidential 1 -way trains are the two -way trains. Transferring the overflow of more saturated belts to less saturated belts. Make sure they are also spaced, if the transfer rate will be reduced. You can adjust the height of each platform your preference as long as they do not invade each other. Scan the Rai Disc again in search of pure aluminiums the height of each platform your preference as long as they do not invade each other. Scan the Rai Disc again in search of pure aluminiums the height of each platform your preference as long as they do not invade each other.
ingot; However, this recipe will not be used in this guide. Manually create all the necessary material to comply with the task list. As always, be creative. Keep only other batteries of them in the invention and store the game after
landing on the islands. It can be ignored by pressing the ESC and clicking on 'Skip' introduction '. In this guide, the standard key requests referenced. Build Trown Platform above the belt platform. The points are rewarded â €
 exclamation! brand. To 'label' a storage building, build a short belt from your output as shown in an image below. the routing of belts and pipes. We automated printing and its production rate is sufficient for subsequent delivery: project assembly - systems. Connect the horizontal belts between the splitters. Press and hold while in a prize to
dismantle it. Move and look for the highest rock pillar from the Northeast. The rabbit leap is a little ruffier than the pioneer gets stuck, as in a one, you may be forgiving the pioneer by clicking on 'reappearance' in the ESC menu. Build energy lines as you move. When the
sufficient action pipes are obtained, the full production of a advanced action. Update of Hub 4 [] Use the calcium and create concrete. A list of unlocked alternative recipes can be viewed at Codex X. Small -scale products automation. To avoid this, replenish the biomass burners regularly. Build a leaky
extractor on top of each pale and alter. Enter a fragment of energy into the miner MK.1 then overclock -the 150%. For the computer, divide the fire belt ruffled into 2; Each feeds on six manufacturers. First, build a miner and two foundations. Use the MK.3 carrier belt. A CARVAN GENERATOR CONSUMES AT 15 CARVAN/MIN AND WE HAVE 16 of the fire belt ruffled into 2; Each feeds on six manufacturers.
them. The belt entrance is indicated with orange points, while the output is indicated with green supports. The recycled samlica, being the smallest quantity compared to the new one, tends to be used first, so that there is no chance of clogging. Oleodutos can resort to foundations, belts and other oils. However, as we do not have a shortage of
petrother at the moment, we can leave to operate for a long time. Find at least one more power of power using the object scanner and then create them all in energy fragments on a handicraft bank. Close your invention window Esc. It is measured that each marco layer is completed, more of the game is unlocked. Customize your color. As the platform
is located at a high altitude that exceeds the 10 meter head elevator 3, a series of pipe pumps are needed to pump the crude oil 3. He can examine the area below his antenna. ? 'mezzanine' 'mezzanine' floors in-between. You will need a lot of Assemblers crafting Smart Platings, but don't forget Versatile Framework and Automated Wiring. Continue to expand using the same method, the water surface will soon be fully
covered. Return to the first Quartz node and pick up all the Portable Miners. We will build a Train network consisting of several Trains moving between the mining outposts and the main Refinery area. There are plenty of Coal nodes there. Uranium is the only resource that is far away, but we can bring it in with a Train. Test the train by parking the
train before the loading Station, then inserting a random item into the Freight Platform and let the train run automatically. Set four Smelters for smelting Iron Ingots and one Smelter for Copper Ingots. We have Steel Beams readily available for Versatile Frameworks. again to confirm the build. Further reading: Smart Splitter Connect all the overflow
belts to an AWESOME Sink. Replace the hotkey four with Conveyor Belt Mk.4. From now on, build with Mk.4 belts, as they have much higher capacity. Swimming is considerably slower than repeatedly jumping out of the water. If not, check the Pump's placement. (4 * 18 * 75 MW = 5400 MW) Use Vertical Build mode R to connect a Pipeline. This
eliminates the need for Pipeline Pumps. Part Assembly[] Craft a Chainsaw in the Equipment Workshop then equip it. By uploading the save files to the Online Map, check if all the buildings are working properly. It prompts us to input 10 Iron Rods to complete the milestone. Allocate the usage of Copper Ingots according to the following ratios: Trains
will be used to transport out the Copper Ingots and Copper Sheets away from the Refinery area. If a building's recipe is changed, all its contents will be transferred to the Inventory. Kill them. Advanced Steel Production[] From the base, scan for Iron Ore, then quickly scan for fo tuo gninnur nehw lufesu si sihT. esle gnihtyna dna niarT a neewteb

Take the bowls and fly back to the advanced post from the turbidity using the same mother. We need 42 refineries
for TurboFuel - while we completed the most nearby Mother of 3. There are many caves we still need to explore - each contains its own reward. A rail division can be created by connecting another rail to an existing two railway joint. Combat and exploitation are also part of the gameplay. Before the new fan is in operation, the old fan is not
dismantled. Opposite generators should be aligned based on the position of the belt connector. Connect each builder with a foundary using transportation belts. Create additional storage boxes near the hub for convenience. Before taming a Lizard Doggo, build a lizard pen near the center using fences and foundations. Mother can be covered in a 3 x 2.
matrix for the tear screws, they are Train Builders: Two assemblers. This is to prepare for the production of supercomputer in the next section. After a duty is constructed and in operation, repeat the design twice more to complete the full configuration. (Check the configuration if it never reaches 125 GW) congratulations! This is to prepare for the production of supercomputer in the next section.
should last hundreds of hours before revisiting this area to expand it. In Rio's division, turn left and move to the target base site. Due to the train bug, sometimes the construction menu will be disabled after a train. In the lower left corner is the pioneer's hall bar. Wait for it to end. Currently, there is a failure where trains can stop working or are not
able to find the next stop for no reason. Drag items for him to exclude the item permanently. He will be kept even if you click another recipe. Let the fan of running, run.
```
